Subject: Menthol Round Robin Study - November 1996

The results for the November 1996 Menthol Round Robin Study are attached. This is the second time that the Product Testing Laboratory has participated in this interlaboratory study for the determination of menthol in flavors. The samples were prepared and calculated according to PPI # 210-204. Three samples of unknown concentration were received by the Product Testing Laboratory. The samples were labeled Lab F - Sample #1, Lab F- Sample #2, and Lab F- Sample #3. Each sample was prepared three times using a 200 to 1 dilution. Each preparation was analyzed once. The sample preparations were analyzed in the order that they appear on the data reporting form. The results are reported in mg/mL.
